

Pipex Manhole Sealing Inserts

Pipex Manhole Sealing Inserts are installed within existing manholes to assist with the prevention of drainage surcharge and foul odours. The units are located beneath the existing manhole cover and anchored in place to the concrete manhole.

We can manufacture in a range of thermoplastic materials to suit the application in either Homopolymer Polypropylene (PP-H) or Polyethylene (HDPE).

Cover plates are bolted in place using encapsulated stainless steel fixings and gasket seals with heavy duty stainless steel handles for access & inspection into the existing manhole.

Typical application areas:

- Below ground drainage
- Trade effluent waste
- Chemical
- Pharmaceutical
- Food and drink processing

Key Advantages:

- Size range to suit existing concrete manholes.
- To retro-fit to circular or rectangular manholes
- Corrosion resistant to H₂S attack
- Simple retro-fit installation
