Max™ Ready

Max Completions | RSM
Remote Service-Rig Monitoring

Real-time platform for service rig operations

Max Completions™ for your service rig operations enables you to schedule crews and equipment, aggregate and view real-time data, analyze and create post-job reports, and create field tickets all in one central location.

View and analyze job data using the multiple chart views, interact with real-time torque and drag and limit models, monitor ton mileage, and add comments to the job log from your browser or on location with the Max Completions mobile application. View live and historical jobs at any time.

During the job, you can create field tickets daily or for all days on location and download the data and comments log at any time.

After each job, you can create post-job reports and access an analytics dashboard that highlights efficiency metrics (KPIs) including plug time, stall ratio, hour/plug, average psi, time below target metrics, and more.

From the office or the palm of your hand, real-time interaction with all your field data has never been easier.

Features

- Display up to 12 channels per chart with low and high alarms
- Multiple fully customizable chart views
- Interactable torque and drag plot
- 3D wellbore graphically displaying job activity
- Customizable and editable comments log with the capability to attach photos and videos
- Advanced KPI reporting
- Secure customer login
- Scheduler that links people and equipment
- Field ticketing
- Asset management
- Dark mode
