

EZstrip™ Pump

Our EZstrip Pumps are reliable transfer pumps that have a patented split coupling which allows a quick and easy way to disassemble and maintain a progressing cavity design in place.

Applications

- Crude oil transfer
- Drilling mud transfer
- Water injection
- Pipeline boosting to overcome pipeline pressures
- Chemical injection
- Produced water transfer
- Drain transfer
- Condensate transfer
- Waste sludge
- Oil water separation

Features and benefits

- Full drive train can be removed in minutes with no electrical disconnection required.
- Time savings
- Pre-assemble drive train available with 2-year warranty
- Eliminate dismantling lengths
- Low shear pumping action
- Varying fluid viscosity does not impact pump performance
- Flow is a function of rotational speed
- Materials of construction
- No special tools needed
- Lower total cost of operation / ownership
- Up to 727 GPM capacity / 24,900 BPD
- Up to 174 psig differential pressures
- 14 F up to 212 F temperature
