

Hybrid Learning

30%
more efficient
compared to traditional
classroom training

This time and cost efficient course consists of a smart combination of e-learning, assignments and hands-on.

E-learning

This module (independent workstation) is designed to introduce participants to the specified NOV equipment. Focus will be on system design and functions to promote system understanding.

Assignments

This module (independent workstation) consists of a set of customized exercises, relevant to your equipment. Focus will be on highlighting specific details in the equipment's user manual and technical documentation. The assignments are to be completed at your own pace after e-learning and prior to hands-on.

Hands-on

This module (on-site or at NOV training facility) combines the knowledge you have gained by completing the e-learning and assignments modules. You will apply this knowledge in a practical hands-on training environment under guidance from an instructor.

This learning experience builds a strong competence for operation of the equipment.
