

Quick Connector

Connect with confidence.

Every minute counts in the installation and maintenance of offshore wind farms. Harsh environments and complex operations demand precise, secure execution. Yet traditional connection methods create risks and delays during numerous lifting operations.

NOV's Quick Connector optimizes heavy lift operations. This innovative system provides a secure connection between the crane's lower block and lifting tools by means of automated technology, delivering unrivaled safety, reliability, and speed.

By automating tool changes and removing personnel from the deck, the Quick Connector, developed by GustoMSC, doesn't just enhance safety—it transforms your entire operation. Its ability to swiftly connect and disconnect components minimizes your downtime, reduces labor costs, and boosts overall project efficiency.

With a permanently integrated pin with latches built into the lower block, our Quick Connector seamlessly connects with the corresponding sockets, ensuring a secure and fail-safe lift.

Experience the safety, reliability, and precision your heavy lift operations demand.

Features

- Integrated pin with latches design
- Integrated into the crane's lower block
- Fail-safe, self-locking mechanism
- Remotely operated
- Slewing functionality
- Battery powered

Benefits

- Fast, secure connections
- Optimized safety and reliability
- Minimizes rigging and on-deck personnel
- Increased effective lifting height
- Minimizes downtime
- Reduces labor costs
