

# MISSION Blak-JAK Washpipe 7500 PSI Cartridge System

Our new MISSION Blak-JAK™ Washpipe Cartridge System is a self contained unit that is designed to be repacked on the rig floor, not at the swivel. Once the assembly has been repacked, the single cartridge can be installed in the swivel quickly just by tightening the nuts to the gooseneck and swivel. A spanner bar is utilized to tighten the nuts, eliminating the use of hammers. Since the packing does not rotate with the nuts on installation, most of the installation can be accomplished by hand. This cartridge is also 25% lighter than OEM designs to aid in maneuverability at the swivel and on the rig floor. Since the installation of washpipe packing is accomplished on the rig floor and not at the swivel, personnel time aloft is greatly reduced thereby promoting a safer workplace.

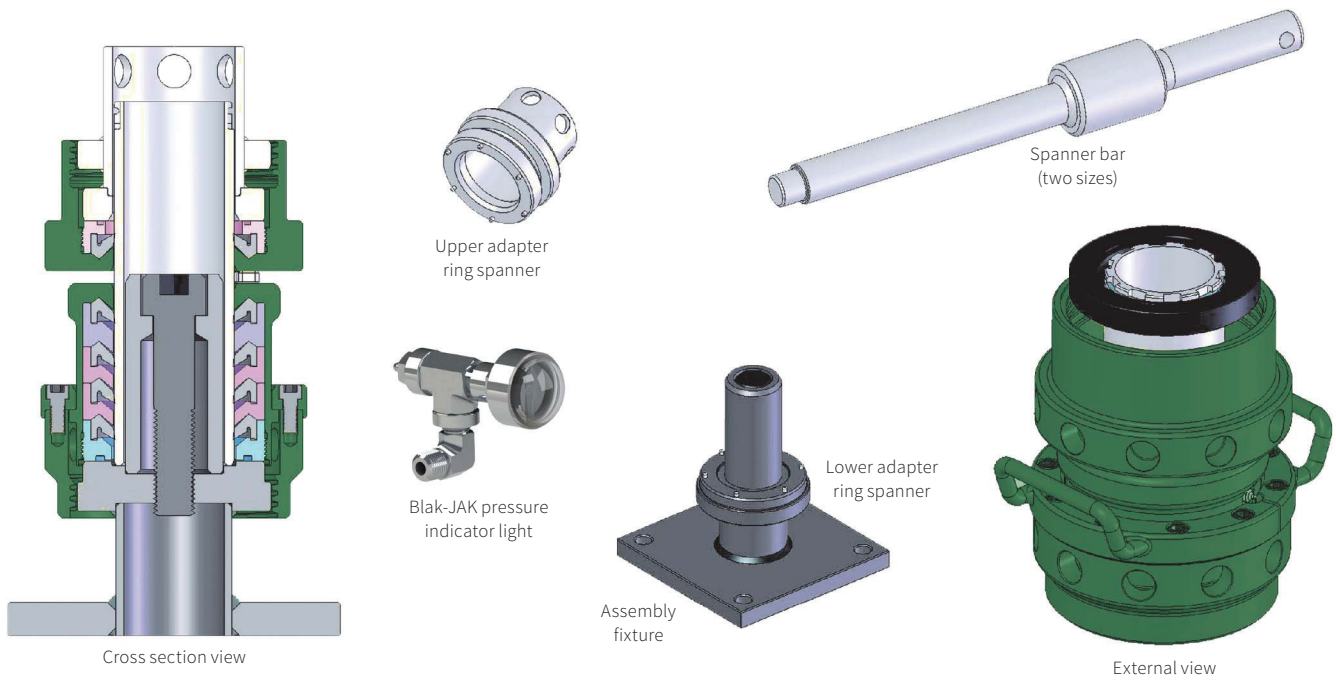

Assembly and repacking of the MISSION Blak-JAK wash pipe cartridge is quick and simple. The washpipe assembly requires no external energizing device such as air or hydraulics to operate or disassemble the cartridge, as in other competing designs. Since the cartridge is designed to be repacked on the rig floor, an extra cartridge can be packed and utilized as a stand-by unit, further reducing downtime to a fraction of the time it takes to rebuild standard or competitive units.

The MISSION Blak-JAK washpipe cartridge system utilizes the same washpipe and packing as the conventional washpipe assembly without any modifications. No modifications to the swivel or gooseneck are required to install the MISSION Blak-JAK washpipe cartridge system and periodic lubrication requirements are identical to the OEM unit.

## Features and Benefits

- Quick change cartridge system
- 25% lighter than competing designs for ease of maneuverability
- Cartridge assembly and disassembly is simple and quick
- Cartridge is repacked on the rig floor not at the swivel
- Utilizes standard packing and washpipe
- Eliminates the need for hammers
- Reduces personnel time aloft for a safer workplace
