

Red Zone Manager

Strengthening personnel defense

Red Zone Manager™ is our latest development for strengthening your defensive protocol within the red zone. We use Salunda's Crew Hawk™ to track your workforce assets and provide an additional layer of awareness and alerts to your operational plan while working with our rig control solutions. Crew Hawk is our preferred redzone management system.

Crew Hawk is a wearable technology that identifies the location of rig floor personnel. Wearing the device in the red zone will trigger alarms. Crew Hawk integrates with our Red Zone Manager and into our Amphion™ or Cyberbase™ control systems. Alerts are also sent to Anti Collision and Zone Management, which can automatically stop movements to prevent collisions between equipment and rig floor personnel.

Built to complement existing automated technologies, Red Zone Manager helps to take care of the greatest assets – your people.

Features and benefits

- Customer-designed zones
- Zone configuration library
- Separate or integrated HMI
- Seamless integration with ACS and ZMS
- Zone breach alerts available for storage
- Personal alarms delivered directly to workers in the line of fire
