

Mud Tank Systems for Any Application. Designed and Built In-House.

Whether it's one of our BRANDT™ modular mud tank systems or a customized piece designed from your drawings, our new manufacturing facility not only means we can make it but guarantees that every piece of equipment we make meets the high standards of quality and safety that our BRANDT name has come to represent. It also means ready access to our deep expertise and industry know how, with over 40 years of specialized, in house solids control and mud system design experience.

Located in Dayton, Texas, our facility enables us to work directly with our customers to design and build whatever the job may require, wherever the need may be. Our fabrication capabilities include full builds of mud tank systems, high pressure and low pressure piping, backyard equipment and custom designed systems, as well as tank systems for industrial and environmental applications. All of our work currently meets ISO 9001 2015 and API Q1 standards. By 2016 we will be ASME certified.

Our Dayton facility is also the home of our land rig solids control inspection service. Conducted by BRANDT certified field maintenance specialists, our solids control inspection service offers a comprehensive evaluation of your solids control equipment and PSA analysis to ensure that the solids removal process is operating at peak performance.

| FEATURES | BENEFITS |
|----------------------|--|
| No outsourcing | Greater cost savings to customer. Full quality control. |
| On-Site Engineering | Decreased process and wait times. Customized job capability—we can build from your drawings. |
| On-Site HSE and QAQC | Ensures highest standards of HSE and Quality compliance. |
| BRANDT Know How | Over 40 years of in house solids control and mud system design expertise ensures we get the job done right the first time. |
| NOV Assurance | As a member of the NOV family, you can expect the support and backing of our global organization long after the sale. |
