Orion IV – End of Life Notice – January 1, 2022

CTES introduced the Orion™ IV data acquisition system (DAS) into the invention market in 2005 and has supplied the industry-leading system for over 16 years. Since 2013, the Orion IV has been upgraded to the Orion V DAS which is currently supplied and fully supported. As various electronic components have been manufacturer-discontinued and we prepare for the newest versions of the intervention data acquisition systems to support the industry's evolving needs, it is necessary to remove the Orion IV system and components from the CTES equipment catalog to ensure we are stocking and providing our customers with the most up-to-date data acquisition components.

Please note, CTES will no longer be officially supporting the Orion™ IV DAS at the beginning of Q1 2022. The current stock of Orion IV components will continue to be supplied while available, and options to upgrade to the Orion V DAS and beyond will be offered for systems and components that cannot be identically sourced.

For more information regarding Orion V and our newest data acquisition systems, please contact ctessales@nov.com or visit us online at <https://www.nov.com/products/orion-v-das-for-intervention>
