

Hydraulic Pressure Recorders

Circular Hydraulic Recorders for every well servicing need. NOV pressure recorders have been under extreme pressure for years, and we like it that way. Designed and built to withstand the harshest oilfield operating conditions, a full line of circular hydraulic pressure recorders are available in configurations to suit virtually any situation.

Truck-mounted units come shock mounted within their own steel enclosures for installation on pump or service trucks. Portable units are freestanding and can easily be transported by car or pickup truck. All recorders have 24-hour wind and 4-hour rotation chart drives with either single or dual pens. Dual pen recorders accommodate either two pressure inputs or are dual range from a single input.

NOV specializes in drilling activity information gathering. When it comes to Drilling instrumentation, nobody does it better than NOV. End-user confidence is gained and maintained through our 80+ years of industry experience and innovation.

M365-Series Recorder with integral pressure gauges accepts dual inputs.

Models

M530-Series

- Truck Mount Recorder with 6" gauge, single input, low and high range, capacities to 15,000 psi

M350-Series

- Truck Mount Recorder, single and dual pressure inputs, capacities to 15,000 psi

M351-Series

- Truck Mount Recorder, single input, low and high range, capacities to 15,000 psi

M252A-Series

- Portable recorder, single and dual inputs, capacities to 15,000 psi

M253-Series

- Portable recorder, single input, low and high range, capacities to 15,000 psi

M365-Series

- Portable recorder with integral 5" pressure gauge(s), single or dual inputs, capacities to 15,000 psi

M366-Series

- Portable recorder with integral 5" pressure gauge, single input, low and high range, capacities to 15,000 psi

M252A Series Recorder for single input applications.
