

Support Services & Spare Parts - Australia

Dedicated to providing 24/7 support to ensure your generator never stops working.

Prime Power Servicing

At Portable Power we understand the importance of having power where and when you need it. Our trade qualified field technicians are available 24/7/365 to ensure that you remain operational day and night. Our service and repair methods are designed to reduce downtime with the added advantage of our huge hire fleet being available in the event of catastrophic failure. We only use quality parts manufactured to the same standard as existing parts and retain a comprehensive store at all of our branch locations. Our workshop support also allows us to carry out engine overhauls, alternator rewinds and general servicing of your entire fleet

Benefits / Features:

- 24/7/365 Breakdown Service
- Field Technicians operating out of all branches:
Perth – Kalgoorlie – Karratha
- Scheduled servicing, load testing, mains fail testing, refuelling and breakdowns
- Workshop repairs, overhauls and rewinds
- Spare Parts available from all branches

Applications

- Oil & Gas
- Mining
- Civil works
- Events
- Agriculture
- De-watering
- Shipping

Standby Generator Servicing

Hospitals, Data Centres, Sporting Stadiums... Standby Generators are designed to work hard instantly and on demand. Chances of failure increase the longer that generators are left dormant. Over time the quality of fuel and oils can deteriorate and hoses and rubber seals can fail. Portable Power recommends that all Standby Generators are checked, started and run every month to reduce failures and to catch any problems in a controlled environment. Portable Power can tailor a service package to coincide with your current operational requirements and your budget.

Recommended Service Packages Include:

- Initial site inspection
- Routine start, run and comprehensive check over with report
- Routine mains failure testing
- Replacing oil, air, fuel and water filters
- Fuel, coolant and oil analysis and replacement as required
- Load testing using Portable Power's own mobile load banks
- Refuelling as required
- Critical parts for your generator kept on shelf at your nearest branch
- 24/7/365 Emergency Breakdown

Our field technicians are available 24/7/365.

Support

Simulated Mains Fail Testing: Is your Standby Generator 'Storm Ready?'
Don't get caught in the dark this winter. Start failures are often caused by Automatic Transfer Switch faults.

Simulated mains fail testing allows you to test your transfer system in a controlled environment and ensures that your generator will start automatically when needed. This test also includes a comprehensive check over your generator and a written report on completion. It may have been years since your last power outage. Is your transfer system still serviceable?

DNV Lifting Frame with Offshore Generator

Spare Parts

Portable Power maintains a comprehensive stock of spare parts for your generator in each of their stores located throughout Western Australia and Queensland. Specialising in Perkins and Cummins products, our spare parts team can assist you with all your requirements including:

- Routine service packs including filters, belts and oil analysis kits
- A.V.R's
- DSE and ComAp Controllers
- Water Pumps
- Solenoids
- Breakers
- Automatic Transfer Switches
- Batteries
